

Connection URL: http://20.244.85.207:9005

Accepted File Extensions: PDF, JPG, and PNG formats are supported for uploads.

Selection for Document Category: Set the document type to **invoice**.

Key Considerations Prior to Endpoint Usage:

1. Utilize the Bearer Token **VINNO-CA-11** for API authentication.
2. When inputting parameters, verify that **form-data** is selected within the request **body**.
3. When using the **job-status** and **job-results** endpoints, confirm that the **job_id** has been provided accurately.

Job_id: This is a unique alphanumeric identifier generated for every server task. It ensures a seamless transition when retrieving **job-status** and accessing **job-results**.

API Endpoint for Invoice Extraction:

Upon execution, the operation provides a unique job_id, typically within a timeframe of 3 to 5 seconds.

End Point	http://20.244.85.207:9005/ extract							
Method	POST							
Parameters	{<table><tr><td>key_values</td><td>value</td></tr><tr><td>file</td><td>(Upload pdf/jpg/png)</td></tr><tr><td>doc_type</td><td>invoice</td></tr></table>}		key_values	value	file	(Upload pdf/jpg/png)	doc_type	invoice
key_values	value							
file	(Upload pdf/jpg/png)							
doc_type	invoice							
Response	{ "job_id": "{job_id}", "status": "queued", "message": "Processing 'n' files in background. Use job_id to check status." }							

Endpoint for Checking Invoice Job Status:

This API provides the current state of the extraction process—indicating if it is still processing or has finished—and includes a numerical progress value for enhanced tracking.

End Point	http://20.244.85.207:9005/job-status					
Method	GET					
Parameters	{<table><tr><th>key_values</th><th>value</th></tr><tr><td>job_id</td><td>(query or string generated as job_id in /extract endpoint)</td></tr></table>}		key_values	value	job_id	(query or string generated as job_id in /extract endpoint)
key_values	value					
job_id	(query or string generated as job_id in /extract endpoint)					
Response	{ "job_id": "{job_id}", "filenames": ["filename.extension"], "doc_type": "invoice" "status": "processing/completed" "created_at": "Datetime" "completed_at": "datetime" "error": "null/error_description" "progress": "in numerical figures" }					

API Endpoint for Invoice Job Results:

This endpoint retrieves the outcome of the job, providing the requested invoices in a JSON format that maintains the client's original data structure.

End Point	http://20.244.85.207:9005/job-results
Method	GET
Parameters	{

	<table><tr><th>key_values</th><th>value</th></tr><tr><td>job_id</td><td>(query or string generated as job_id in /extract endpoint)</td></tr></table> }	key_values	value	job_id	(query or string generated as job_id in /extract endpoint)
key_values	value				
job_id	(query or string generated as job_id in /extract endpoint)				
Response	{ "job_id": "{job_id}", "filenames": ["filename.extension"], "doc_type": "invoice" "status": "processing/completed" "created_at": "Datetime" "completed_at": "datetime" "has_results": "true/false" "results" : [] }
